

Cybernet Security Advisor

Compliance in minutes... Not days...

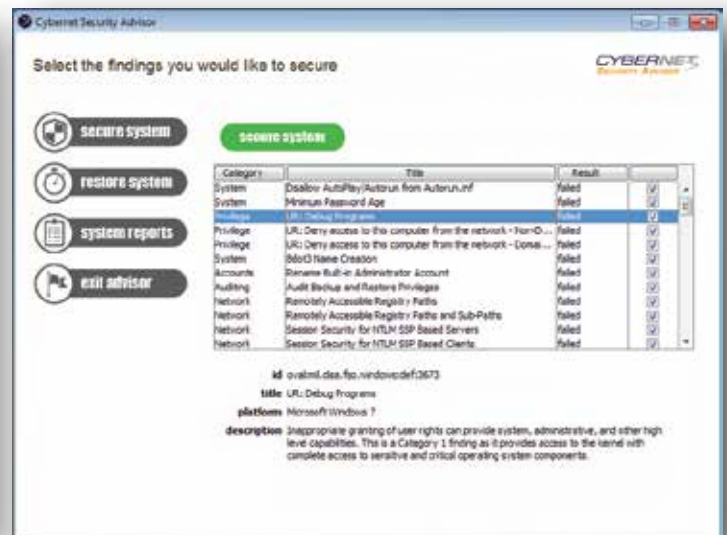

Cybersecurity/Information Assurance compliance regulations are confusing and time consuming to apply. It can take days per system for an average Cybersecurity worker to maneuver through hundreds of pages of Security Technical Implementation Guides (STIGs) put out by DISA and NIST.

The DIACAP/RMF process for DoD system compliance requires the application of these STIGs. These guidelines must be reapplied and validated on a monthly basis in order to keep a system secure and compliant (required for ATO maintenance). This process of maintaining security can become very costly and time consuming.

Cybernet's Security Advisor reduces maintenance costs by reducing the time required to apply a STIG. Gone are the days of flipping through hundreds of pages of STIG checklists. Security Advisor offers an easy to use interface with an extremely powerful engine that can apply an entire STIG in a matter of minutes, rather than days.

By reducing the amount of time needed to make a system compliant, system administrators can focus on protecting their systems, data, and users rather than being drowned by hundreds of pages of checklists. Security Advisor also allows workers with less Cybersecurity experience to easily bring a system to compliance, continuing to drive down the costs of Cybersecurity maintenance.

Cybernet's Security Advisor Provides A Proven Solution to Cybersecurity and Information Assurance Challenges
